

Interviewee C

1. What is global warming?

It is a problem of the civilization I think we make a lot of warm situation in our way of life the result is that global warming

2. What is it that we do with this way of life that causes this warm situation?

It think it's a big problem in the United States for instance because you have a lot of activity with your car and your fridge and your way of life in the house everywhere and you take a lot of the energy –

How is this taking a lot of energy causing global warming electricity and power

So what is exactly causing this global warming itself

I don't know exactly because I don't think it's a global warming here you see that the situation to day is very warm not very hot it's alright sometimes not necessarily the conclusion of global warming

What do we need to prove it is a result of global warming?

I don't think it's make a connection between the global warming and the weather today yes when you go to the north pole you see the ice are.. the situation is more completely at the north and south pole, but I am not very anxious to see this but...

Why do you think the n and s pole are feeling it more than we are?

The problem with the ice some people say some scientists say it is because of global warming but I am not exactly sure

What do you think could be actually done about the situation about global warming?

Walk a lot don't take the car no wear

To Don't for woman to make sometime kitchen for woman to make cooking a long time it's a way of life the American people more than European people

So because we are in the states American women are not cooking at home...?

I think there is a connection bwtm global warming and obesity problem – I think exact same situation of the complications fo the way of life You know that in the United states 60% of people are [overweight] – not exactly obesity
